Research Summary

My research aims to build AI systems that **learn efficiently and generalize reliably**. I develop algorithms for **LLM post-training**, focusing on reinforcement learning and on-policy distillation for reasoning models and coding agents. My research combines algorithm design and theoretical analysis. Recent work includes Reward-Aligned Distillation, which weights teacher supervision by its predicted effect on the student's task reward[1]; a framework connecting on-policy distillation to RL advantage estimation[2]; and self-distillation for agents using privileged information[3].

My broader research spans **learning theory and generalization**, including transformer in-context learning[8], provable dataset distillation[11], neural-network generalization[9][12][10][13], and connections between neural networks and kernel methods[14].

Education

University of California San Diego (UCSD) — San Diego, USA
Ph.D. in Computer Science — *Sep. 2022 – Mar. 2027 (expected)*

Advisors: Prof. Arya Mazumdar & Prof. Yian Ma
Committee: Mikhail Belkin, Sanjoy Dasgupta, Sicun Gao

University of California San Diego (UCSD) — San Diego, USA
M.S. in Computer Science — *Sep. 2020 – Jun. 2022*

Advisors: Prof. Tsui-Wei (Lily) Weng & Dr. Lam M. Nguyen (IBM Research)

Xi'an Jiaotong University (XJTU) — Xi'an, China
B.E. in Information Engineering — *Aug. 2015 – Jun. 2019*

Experience

Amazon AWS Agentic AI — Kiro Science — Santa Clara, USA
LLM Post-training: Reinforcement Learning and Distillation — *Jun. 2026 – Sep. 2026*
Applied Scientist Intern · Hosts: Vijay Lingam, Rein Houthooft, Luke Huan

- Proposed **Reward-Aligned Distillation (RAD)**, a bilevel framework that weights token-level teacher supervision based on its predicted effect on the student's task reward, strengthening helpful signals and suppressing or reversing harmful ones. [paper]
- Built the end-to-end distributed LLM training pipeline in **verl** and developed a **custom Triton kernel** for attention Jacobian–vector products, enabling reward-guided token weighting during on-policy distillation.
- Improved mean accuracy across six **math benchmarks by 6.5 percentage points (pp)** for Qwen3-1.7B (non-thinking) and **LiveCodeBench-v6 pass@1 by 6.4 pp** for OLMo3-7B-Instruct over the strongest baselines.
- Applied RAD to **agentic software engineering**, improving **SWE-bench Verified pass@1 by 3.7 pp over the strongest baseline** with a Qwen3.5-4B student and Qwen3.6-27B teacher, while training for **half as many R2E-Gym epochs**.
- Contributed to the algorithm development of **PINT**, an on-policy **self-distillation** framework that internalizes privileged information into a temporary teacher's parameters, improving Qwen3-1.7B **WebShop success by 18.5 pp** over SDAR. [paper]

Google Research — New York, USA
On-Policy Distillation for LLM Reasoning — *Jun. 2025 – Sep. 2025*
Student Researcher · Hosts: Ankit Singh Rawat, Aditya Krishna Menon

- Developed a **theoretical framework connecting on-policy distillation with RL advantage estimation**, explaining how teacher models can supply dense token-level learning signals. (In submission)
- Proposed **discounted sequence- and token-level distillation methods** informed by generalized advantage estimation (GAE), and analyzed the bias–variance trade-offs of their gradient estimators.
- Implemented proposed algorithms in **TRL**, improving AIME 2025 accuracy by **9.4 pp over GRPO and 4.9 pp over KDRL**.
- Conducted pretraining, supervised fine-tuning, and knowledge-distillation experiments with Gemma 3 and Qwen3 models using Wikipedia, SlimPajama, Tulu3, and Skywork datasets.

The University of Tokyo and RIKEN AIP — Tokyo, Japan
Theory for Large Language Models and Deep Learning — *Jun. 2024 – Sep. 2024*
Research Intern · Advisor: Prof. Taiji Suzuki

- Developed theoretical analyses for emerging abilities of LLMs including **in-context learning, scaling laws, and chain-of-thought**.
- Established **sharp generalization bounds for gradient flow** through a data-dependent loss path kernel, combining stability analysis with Rademacher complexity (NeurIPS 2025).

University of California San Diego San Diego, USA
LLMs, Deep Learning Theory and Trustworthy Machine Learning *Jan. 2021 – Present*
Graduate Student Researcher · Advisors: Arya Mazumdar, Yian Ma, Lily Weng

- Analyzed **transformer in-context learning for single-index models**, characterizing optimization dynamics, optimal solutions, generalization, and scaling behavior.
- Developed a **provable and efficient dataset-distillation algorithm** for kernel ridge regression, establishing conditions under which **one synthetic example per class** exactly recovers the original model (NeurIPS 2024).
- Introduced the **loss path kernel** to connect neural-network loss dynamics with kernel methods, derive generalization bounds, and guide **neural architecture search** (NeurIPS 2023). Established **neural network–SVM equivalence** in the infinite-width neural tangent kernel regime (NeurIPS 2021).

Shanghai Jiao Tong University Shanghai, China
Interpretable Machine Learning *Jul. 2019 – Jun. 2020*
Research Intern · Advisor: Prof. Quanshi Zhang

- Developed quantitative measures of task-relevant and task-irrelevant visual concepts to explain the success of **knowledge distillation**, and evaluated the resulting hypotheses across neural-network architectures (CVPR 2020; TPAMI 2023).

Publications

* Equal contribution.

Invited Talks

Generalization Bound of Gradient Flow through Training Trajectory and Data-dependent Kernel
EnCORE Institute Workshop on Theoretical Perspectives on LLMs — *Mar. 2025*

Analyzing Neural Networks through Equivalent Kernels
RIKEN AIP–SJTU CS Joint Workshop on Machine Learning and Brain-like Intelligence — *Aug. 2024*
Southern California Applied Mathematics Symposium (SOCAMS 2024) — *Apr. 2024*

Analyzing Generalization of Neural Networks through Loss Path Kernels
ByteDance — *Jan. 2024*
AI TIME — *Nov. 2023*

Teaching

DSC 212: Probability and Statistics for Data Science, Teaching Assistant — *Fall 2024*
DSC 140B: Representation Learning, Teaching Assistant — *Spring 2024*
DSC 210: Numerical Linear Algebra, Teaching Assistant — *Fall 2023*
DSC 291: Trustworthy Machine Learning, Teaching Assistant — *Fall 2021*

Professional Service

Conference Reviewer: ICML (2022–2025), NeurIPS (2022), ICLR (2022, 2024–2026)
Area Chair: ICLR 2026 DeLTa Workshop
Journal Reviewer: Journal of Optimization Theory and Applications (JOTA)

Technical Skills

Programming: Python, C/C++, MATLAB, JavaScript
Machine Learning & Systems: PyTorch, JAX, Verl, TRL, distributed training, Triton, Linux
Theory: Linear algebra and matrix analysis, high-dimensional statistics, (non-)convex optimization

Honors & Awards

NeurIPS 2023 Scholar Award — *Dec. 2023*
Simons Institute Deep Learning Theory Workshop Funding — *Aug. 2022*
Outstanding Student Award — *Sep. 2016 and 2018*
"Siyuan" Merit Scholarship — *Sep. 2016, 2017, and 2018*
